To whom it may concern,

Jones Associates Architects, LLC has had the opportunity to work with Chinmay Vyas and CV, INC. Consulting Engineers Inc (CVI) on several projects over the past eight (8) years. These projects have ranged from full site development for new facilities thru additions and renovation of existing facilities. Most recently, we worked with them in the design of a new apartment building at 6925 Georgia Ave., NW in Washington, DC. This project entailed designing to green site and green buildings criteria, as well as the coordination of utilities in a very complex setting.

The engineers at CVI are thorough, experienced, and very competent in their initial design and in responding to issues that arise throughout the project. We value the relationship we've established with their firm and strongly recommend CVI for the services they provide.

With best regards,

Michael D. Jones, AIA
Principal
